1 Bleachers
1" = 1'-0"

EXAMPLE OF TYPICAL NEEDED REPAIR

- LIFT DAMAGED BOARD AT STEP FRONT AND RESECURE
- ADD MISSING TRIM TO UNDERSIDE OF FRONT BOARD AS IS TYPICAL; MATCH PROFILE OF SIMILAR

BLEACHER REPAIR NOTES

1. Repair any rot with new wood boards with matching profiles and density.
2. Any split wood shall be repaired with a standard carpentry glue repair only if and when the repaired wood appears as new after the repair is made.
3. All wood (painted or unpainted) shall be sanded with 120 Grit as preparation for new paint. It is not necessary to remove paint entirely as long as these requirements are met:
 - A. wood is smooth in appearance and to the touch
 - B. existing paint is not chipped or peeling
 - C. no evidence of past or present issues concerning the proper adhesion of previously painted surfaces exists
4. Existing roundovers and other profiles shall not be sanded so that they lose their detail.
5. Any new wood shall be primed and sanded for flush appearance and feel to it's neighboring members.
6. Any boards that are to be replaced within a field condition shall be spliced in so that joints in the field do not line up from one row to the next. Proximity of such joints shall not be closer than 1/3 the members typical length.
7. All woodwork that makes up the bleacher assembly, including but not limited to aisles, risers, treads, bench seats, flooring, partial height walls, etc. shall be primed, resanded with 150 grit sandpaper, and then coated with a minimum of 2 coats of an enamel paint.
8. Contractor shall provide a finished sample measuring no less than 10 square feet of woodwork for the architect's approval before repair is made to the rest of the bleacher project.
